

SAMPLE Medical Chronology 1

Patient Name: Fake Patient

Date Range: July 26, 2024 – April 14, 2025

Prepared by: Ronald Faries, DC, FABDA, FAAIM, DAAIM

Date Prepared: July 28, 2025

July 26, 2024 – April 14, 2025

Provider(s): Dr. Ronald Faries, DC, FABDA, FAAIM, DAAIM

Location: Keller Family Chiropractic

Summary:

The patient received conservative chiropractic care, including spinal adjustments, interferential electrotherapy, intersegmental traction, infrared therapy, and spinal decompression.

Recommendations:

- Cervical Davis Series
 - Lumbar spine complete series
 - Thoracic spine X-ray
 - MRI of the cervical and lumbar spine
-

August 12, 2024

Provider: Robert Longenecker, MD

Facility: Prime Diagnostic Imaging

Imaging: Cervical, Thoracic, and Lumbar Spine X-rays

- **Cervical Spine:**
 - C5–C6 retrolisthesis (1–2 mm) in neutral position
 - Moderate left-sided foraminal stenosis at C5–C6
 - Mild bilateral foraminal stenosis at C5–C6 and C6–C7
 - Mild uncinata and facet hypertrophy at C3–C4
 - Straightening of cervical lordosis
 - Dynamic instability at C2–3 and C4–5 indicating ligamentous laxity
 - **Thoracic Spine:**
 - No fracture or compression
 - Shallow dextroscoliosis of mid-thoracic spine
 - Anterior endplate spondylosis at T6–T7
 - **Lumbar Spine:**
 - Grade 1 retrolisthesis at L4–5 (4.6 mm) and L5–S1 (4–5 mm)
 - Multilevel disc space narrowing and endplate spondylosis
 - Hypolordosis
-

September 6, 2024

Provider: Robert Longenecker, MD
Facility: Prime Diagnostic Imaging
Imaging: Cervical and Lumbar MRI

- **Lumbar Spine MRI:**
 - Acquired central canal and bilateral foraminal stenosis at L4–5 and L5–S1
 - Multilevel annular bulging, facet hypertrophy, ligamentum flavum thickening
 - Posterior disc protrusions at L2–3 and L3–4 (2.5 mm) impinging the thecal sac
 - High-intensity annular tear at L3–4 suggestive of acute disc injury
 - Bilateral facet effusions consistent with post-traumatic inflammation or facet syndrome
 - Hypolordotic alignment
- **Cervical Spine MRI:**
 - Multilevel disc derangement, spondylosis, and facet arthrosis
 - C6–7: Right paracentral/right foraminal disc protrusion (2–3 mm)
 - Mild cord impingement
 - Moderate impingement of right C7 nerve root
 - C5–6: Left paracentral disc protrusion (2–3 mm)
 - Cord impingement and central canal stenosis
 - Foraminal stenosis bilaterally
 - Hypolordotic alignment (confirmed in supine imaging)
 - Findings consistent with dynamic instability and abnormal spinal biomechanics
 - Clinical correlation recommended

September 6, 2024

Provider: Anthony Eric Gioia, MD
Facility: Foundation Physicians Group
Visit Summary:

Patient presented with chronic headaches, focal cervical and lumbar pain, left arm radiculopathy, and paresthesia in the right chin.

Assessment:

- Probable post-concussive syndrome
- Cervical and lumbar strain vs. discogenic syndromes

Plan:

- Supportive care on an as-needed basis

September 9, 2024

Provider: William J. Hwang, MD
Facility: Elevate Health Clinics
Visit Summary:

Neurological evaluation post–motor vehicle collision.

Plan:

- Follow-up as needed
-

October 4, 2024 – March 25, 2025

Provider: Dr. Mark Valente, DO

Facility: MEG

Visit Summary:

Patient reported ongoing pain in the neck, left arm, lower back, and right leg following a motor vehicle crash.

Treatment Plan:

- Physical therapy (cervical and lumbar spine) focusing on core strength and flexibility
- Physician-guided home exercises
- Consideration for cervical and/or lumbar epidural steroid injections
- Follow-up as needed
